## Full Product Catalog

Updated: 6/12/2019

Live better days

Established in the  
U.S. in 1976

1 in 7 Gx prescriptions  
dispensed is filled with  
a Teva product<sup>1</sup>

Key Therapeutic Areas:  
CNS, Pain, Oncology  
and Respiratory

One of the top pharma  
companies in the U.S.

In the last decade, the  
U.S. healthcare system has  
saved \$1.67 trillion due to  
the availability of low-cost  
generic medicines.<sup>2</sup>

1. IMS Health NPA Data as of MAT December 2017.

2. Association for Accessible Medicines. 2017 Annual Report, page 24.

## Therapeutic Equivalence Ratings

Drug products the FDA considers therapeutically equivalent to other pharmaceutically equivalent products. These codes are published in FDA's Orange Book:	
<b>AA</b>	Products in conventional dosage forms not presenting bioequivalence problems
<b>AB</b>	Products meeting necessary bioequivalence requirements
<b>AB1</b>	Products meeting necessary bioequivalence requirements, assigned when more than one reference listed drug of the same strength has been designated under the same heading
<b>AB2</b>	Products meeting necessary bioequivalence requirements, assigned when more than one reference listed drug of the same strength has been designated under the same heading
<b>AB3</b>	Products meeting necessary bioequivalence requirements, assigned when more than one reference listed drug of the same strength has been designated under the same heading
<b>AB4</b>	Products meeting necessary bioequivalence requirements, assigned when more than one reference listed drug of the same strength has been designated under the same heading
<b>AN</b>	Solutions and powders for aerosolization
<b>AO</b>	Injectable oil solutions
<b>AP</b>	Injectable aqueous solutions and, in certain instances, intravenous non-aqueous solutions
<b>AT</b>	Topical products
<b>BD</b>	Products containing active ingredients with known bioequivalence problems and for which adequate studies have not been submitted to FDA demonstrating bioequivalence

## Latex Content

The term "natural rubber" includes all materials made from or containing natural latex. Products containing natural rubber are made using two commonly employed manufacturing processes: the natural rubber latex (NRL) process, and the dry natural rubber (DNR) process.

"Natural latex" is defined as a milky fluid that consists of extremely small particles of rubber obtained from plants, principally from the *H. brasiliensis* (rubber) tree, dispersed in an aqueous medium. It contains a variety of naturally occurring substances including cis-1,4-polyisoprene in a colloidal suspension and plant proteins, which are believed to be the primary allergen.

The NRL manufacturing process involves the use of natural latex in a concentrated colloidal suspension. Products are formed from natural rubber latex by dipping, extruding, or coating, and are typically referred to as containing or made of "natural rubber latex."

The DNR manufacturing process involves the use of coagulated natural latex in the form of dried or milled sheets. Products are formed from dry natural rubber by compression molding, extrusion, or by converting the sheets into a solution for dipping. These products are typically referred to as containing or made of dry natural rubber or "crepe" rubber. Examples of products that may contain dry natural rubber include syringe plungers, vial stoppers and injection ports on intra-vascular tubing.

For more information from the FDA about natural rubber, please visit [www.fda.gov/RegulatoryInformation/Guidances/ucm070925.htm](http://www.fda.gov/RegulatoryInformation/Guidances/ucm070925.htm).

Based on the information provided by our suppliers, the product listing in this brochure will relate to a specific component of the medical product, its container, or any packaging.

Should you have additional questions, please feel free to contact Teva at 888.838.2872.

The icons below are used throughout the product sections to identify key product attributes.

**PRESERVATIVE FREE** Indicates products that are preservative free, minimizing the risk of side effects and allergic reactions.

**INDIVIDUAL BAR CODE** Identifies unit dose products and injectable products labeled with a scannable standard code 128 bar code or a scannable standard RSS bar code. Each bar code contains the NDC number for a single tablet, capsule, or a single vial. This feature helps ensure accuracy and patient safety when dispensing, and facilitates order entry and inventory maintenance.
